

Omega-Phone 924

Every job requires different tools, and a phone system is no exception. While the technology available today is as powerful as ever, investing in the RIGHT technology is the key to small business success. That's why we offer the Omega-Phone 924 that is *just right* for small businesses – the features you need in a size you can utilize.

OMEGA-PHONE DIGITAL STATION

The OM-KTD30 provides easy access to Omega-Phone 924 system features while on a call. A large 3-line x 16-character LCD provides caller ID information and guides users through feature operation such as two and three party call conferencing. A navigation key also acts as a short cut allowing users to scroll through and access any of the features through the station display.

VOICE MAIL

An optional eight port voice mail module is available with the Omega-Phone 924 system that delivers six hours of message storage. The voicemail features live call screening, one-touch call record and cell phone notification. Voice mail messages can also be automatically sent to the user's email inbox so they can be accessed from a PC.

AUTO ATTENDANT

Utilize the Automated Attendant available with the Omega-Phone 924 to greet callers with customized messages. Reduce wait times, and save resources by automatically directing callers to the appropriate person or department.

CELL PHONE NOTIFICATION

Stay connected to the office from anywhere without investing in a Unified Communications platform. The Omega-Phone 924 voicemail system will call an external number, like a cell phone, and send notification of a new voicemail in the user's office inbox.

LIVE CALL SCREENING

After incoming calls have been sent to voicemail, users can monitor the caller as they leave a message, and retrieve them from voicemail with one touch at the station.

FAX DETECTION

The Omega-Phone 924 features embedded fax detection software that routes incoming faxes to the appropriate destination without extra hardware.

WIRELESS

The OM-8WRLS 2.4 GHz wireless phone is equipped with three interactive soft keys, six programmable feature keys, and a backlit three-line LCD. A maximum of four wireless telephones and two base stations can be installed on the Omega-Phone 924 system.

OM-8WRLS 2.4 GHz Wireless Phone
